UTHPALA J SHETTY

Java Backend Developer | Java 17 · Spring Boot 3 · Microservices · Kafka · AWS · AI-Assisted Development
+91-9141161838 | uthpalajshetty@gmail.com | Bengaluru, India | linkedin.com/in/uthpala-j-shetty-37141521a

PROFESSIONAL SUMMARY

Java Backend Developer with 4 years of experience designing and delivering Spring Boot 3 microservices at Mercedes-Benz Research and Development. Specialized in event-driven systems with Apache Kafka on Amazon MSK, PostgreSQL and Oracle data layers, secure API integrations, and CI/CD on AWS and Kubernetes. Led an AI-assisted modernization of a legacy Java EE application, using GitHub Copilot and Devin while critically validating and hardening all AI-generated code to production standards. Served as Proxy Project Lead for a 12-member Agile team across 4 Program Increments, with a consistent focus on clean, well-tested, and secure code. Also provided L2/L3 production support for live services, covering incident triage, root cause analysis, and hotfix delivery.

TECHNICAL SKILLS

Languages: Java 17, SQL, TypeScript
Architecture & Design: Microservices Architecture, Event-Driven Architecture, Distributed Systems, RESTful API Design, Asynchronous Messaging, Caching & Rate Limiting, Distributed Locking, Resilient Service Integration (timeouts, error handling), Design Patterns, SOLID Principles, Legacy System Modernization
Frameworks: Spring Boot 3, Spring Security, Spring Data JPA, Hibernate/JPA, Spring Batch, Spring WebClient, OpenFeign
APIs & Security: OpenAPI/Swagger, Bean Validation, ProblemDetail (RFC 9457), OAuth2, mTLS, Angular frontend integration
Messaging & Event-Driven: Apache Kafka, Amazon MSK
Databases & Storage: PostgreSQL, Oracle, Redis, OpenSearch, Flyway
Cloud & DevOps: AWS (ECS Fargate, ECR, MSK), Docker, Kubernetes, GitHub Actions, CI/CD
Testing & Code Quality: JUnit, Mockito, Cucumber/Gherkin, JaCoCo, SonarQube, Coverity
AI-Assisted Development: GitHub Copilot, Devin, Prompt Engineering, Markdown Instruction Files, AI Code Review & Validation
Practices & Tools: Agile/SAFe (PI Planning), Technical Leadership, Code Reviews, Git/GitHub, Postman, Production Support, Incident Management, Root Cause Analysis (RCA)

PROFESSIONAL EXPERIENCE

Java Backend Developer | Mercedes-Benz Research and Development — Aug 2022 – Present

Contract Management Platform | Aug 2022 – Present

Java 17, Spring Boot 3, Hibernate/JPA, PostgreSQL, Apache Kafka, Docker, GitHub, AWS, Kubernetes, JUnit, Cucumber, SonarQube

- Designed, developed, and maintained Java 17/Spring Boot 3 microservices and REST APIs for a contract management platform covering contract lifecycle, product configuration, and vehicle management workflows, implementing DTO validation, OpenAPI documentation, and standardized ProblemDetail error responses to ensure consistent API behavior across services.
- Served as **Proxy Project Lead for a 12-member Agile team** across 4 Program Increments, driving sprint execution, leading technical discussions in PI Planning, and coordinating with frontend, QA, and business stakeholders for on-time delivery.
- Developed event-driven workflows using Apache Kafka on Amazon MSK to coordinate contract, product, and vehicle management processes through asynchronous inter-service messaging.
- Built PostgreSQL persistence layers using Spring Data JPA and Hibernate, managed schema migrations with Flyway, and implemented Spring Batch jobs for vehicle and service-history synchronization. Implemented JDBC-backed process locking for scheduled tasks, Redis-backed token caching and rate limiting, and OpenSearch-powered product search.
- Implemented service-to-service and external API integrations using OpenFeign and Spring WebClient, securing external connections with OAuth2 and mTLS and configuring header propagation, response timeouts, and downstream error handling.
- Raised automated **test coverage from ~50% to 95%+** using JUnit, Mockito, Cucumber/Gherkin, tracked through JaCoCo; maintained zero critical security findings over 4+ release cycles through 100+ code reviews per year with SonarQube and Coverity.
- Built GitHub Actions CI/CD pipelines automating builds, Docker image publishing to Amazon ECR, SonarQube quality gates, Cucumber end-to-end tests, and deployments of 10+ services to AWS ECS Fargate with post-deployment health checks, cutting release time from ~40 min to under 15 min and reducing deployment incidents by ~30%.
- Provided **L2/L3 production support** for 10+ live production microservices on AWS ECS Fargate, triaging incidents via logs and OpenSearch, performing root cause analysis on Kafka, Spring Batch, and API failures, and shipping hotfixes to prevent recurrence.
- Delivered full-stack features by integrating Spring Boot REST APIs with the Angular frontend and testing complete end-to-end flows across UI and backend.

Legacy Enterprise Application Modernization — AI-Assisted Delivery (parallel initiative) | Jul 2026 – Aug 2026· 1 month

GitHub Copilot, Devin, Angular, Spring Boot 3, Oracle

- **Led a 4-member team** modernizing a legacy Java EE/Swing enterprise application into an Angular and Spring Boot REST architecture with an AI-first workflow, **delivering ~10 modules (50+ interconnected sub-screens) in one month**
- Designed a repeatable **AI development workflow using GitHub Copilot and Devin**: authored project-wide Markdown instruction files covering architecture, coding standards, and legacy-mapping rules, and had AI produce a frontend and backend implementation plan per screen before code generation and integration.
- **Critically reviewed and validated all AI-generated code** against the legacy application, flow by flow; identified missing features, incorrect business rules, and integration gaps, and resolved them through targeted re-prompting or manual fixes to meet quality, security, and maintainability standards.
- Built Oracle-backed simulation APIs with paginated filtering and multi-sheet XLSX export, preserving legacy business rules and shared-database compatibility through OpenAPI contracts, transaction handling, and test suites with **100% coverage on migrated features**.

Software Engineering Intern | Mercedes-Benz Research and Development — Apr 2022 – Aug 2022

- Built a Python/Selenium tool that monitors incoming emails, extracts attachments, and triggers notification workflows, processing 50+ emails daily and cutting file-retrieval turnaround from hours to under 30 minutes.

CERTIFICATIONS

Certified SAFe 6 Agilist | DevSecOps Grey Belt and White Belt — Mercedes-Benz Internal Security Program | AWS Cloud Technical Essentials — Udemy | Gradle for Java Developers — Udemy

EDUCATION

B.E. in Information Science Engineering — NMAMIT, Nitte | GPA: 9.4/10 — August 2022
